Optimum Fund was founded by a group of experienced developers and passionate entrepreneurs.

The team has both vast experience in both web3 technology and the crypto.

We have an aim of building a sustainable and profitable yet fun platform, for both our investors and users.

We will be constantly extending our range of services and products to our investors keeping in mind the current, market conditions at that specific time, offering an advantageous edge to our investors.

Optimum Fund's roadmap is clearly and perfectly laid out in that, each and every step that the project undertakes investors can swiftly follow through.

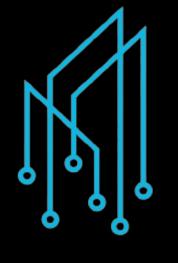

The team also comprises of experienced and strategic marketers who have an in depth understanding of most, if not all dynamics of the crypto. The team has an overhead advantage of having all services done in-house including, contract and Dapp deployment, website development, project managers and creatives.

Optimum Fund targets to make endless partnership with protocols that have the same vision as us. We will carefully vet projects that we come to agreement in terms of collaborations. Optimum Fund will also have a paid tutorial program, a concrete explanation about the program will be provided.

Optimum Fund will not only be a de-fi protocol but will also offer incubating services. We will assist other projects to have better outcomes through effective and thorough incubation. Incubation will be done in-house, from contract development and deployment, DAPP development, marketing, web development and design.

With that said, a small fee will be hardcoded in the contracts and the fee will range from 0.5-3% for buying and selling taxes of that specific project. The fee will be injected directly into the Optimum Fund protocol in form of liquidity and development of the ecosystem.

Strict procedures will be laid out for any incubation services, carefully vetting the projects and project owners ensuring safety of our investors who are our top most priority. A KYC procedure will be mandatory whenever a project wants to be incubated. As stated earlier, everything will be done in-house by experienced and professional developers with a strong marketing team.

Contracts made by us for other projects, will also be subject to third-party audits and this will be made available for public viewing. Optimum Fund investors will also enjoy early access to projects incubated on our platform.

Optimum Fund plans on rolling out tutorial programs. The main aim of this program is to educate and equip investors with necessary skills and information to have an edge in the market. The tutorials will be available to educate new traders that have recently joined de-fi and crypto.

We realised that there is a huge gap in crypto trading with most investors missing out on passive income protocols offered by various projects. Most investors just want quick gains through dumping of tokens. This in turn hurts investors who utilise services that a protocol has to offer.

Our main aim will be educating investors on protocol architecture with a small monthly fee being charged for registration for the tutorial program, which will be renewable monthly or yearly. A percentage of that fee will be directed to the marketing wallet helping to build the ecosystem further. Subscribers will enjoy weekly videos and newsletters on what's hot in the market.

Subscribers will also be taught technical analysis from basic to advanced levels. Enlightened investors reduce the risk of paper-hands and minimise plummeting of projects that launched recently. We'll also implement separate Web3 classes for developers who want to transition to Web3 technology.

The Chest will be part of the Optimum Fund ecosystem. Here investors can stake their OMF tokens. The Chest offers guaranteed allocations in various projects that will be incubated by us. Before an IDO raise, snapshots will be taken of staked OMF tokens in The Chest.

To prevent people from buying in at the last minute, so as to participate in the IDO's only, it will be mandatory for each individual, to have staked their OMF tokens in The Chest two weeks prior before an IDO raise. Some of the taxes will also be injected back to The Chest so as to make the protocol sustainable.

Incubation plays a part in sustainability of The Chest through the investment of OMF tokens before any IDO raise. This will not only make the token chart to have a good floor price but will also keep The Chest up and running. OMF staking offers an innovative solution to an outstanding and lasting staking rewards system. OMF non-custodial model gives stakers control of their tokens with no high-risk operations. More details about The Chest application will be rolled out in due time.

Optimum Fund is a community driven project. In recent times we have witnessed how strong communities have led to the ultimate success of a project. We believe in the power of the community and will be offering new, unique and creative ideas to build up the Optimum Fund ecosystem.

As mentioned earlier Optimum Fund holders will have an advantage of investing in IDO raises in projects that have been incubated by us. After token launch we'll announce how many OMF tokens will be required to participate in IDOs.

This will also assist in sustaining the OMF chart making the whole ecosystem sustainable. We have the best marketing team and advisors on-board. We plan aggressive marketing under various platforms including social media platforms. Partnerships and collaborations have also proven to be really helpful in providing exposure for projects.

Partnerships that we have secured will be announced in our main social media channels and updated on the website. We'll carefully vet projects we decide to form collaborations with and secure the best possible partnerships in the business. Progressive and consistent marketing will be done throughout in-order to attract new investors and maintain the current investors too.

Optimum Fund ecosystem will have several contracts all in which will be deployed on Binance Smart Chain Network. As indicated on the roadmap, we plan on Optimum Fund deployed on different chains. Additional contracts will also be deployed on the various chains but this comes later on.

All contracts that will be deployed will be subject to a third party audit from a trusted and well known audit company. We have full confidence in our contracts but audits are equally important since this creates confidence and trust among our investors.

Once the contracts are audited they will be made available for public viewing. The contracts will also be verified on BSC scan for the public to view the code themselves. A small private sale will be conducted. Private buyers will be carefully hand picked and vetted before contribution.

Private sale investors wallets will also be screened before contribution. Complete transparency will be adhered to. Once the contracts audit are complete we will move forward and begin the the presale funding. The presale will be held on a trusted and popular launchpad.

Details about the private sale and presale will be communicated on our social media platforms and the official website. Kindly stay tuned for this. Only use contracts and links that will be shared on our official website and official social media platforms. The private sale funds will be directed to marketing, development and securing partnerships. The presale funds will be used to provide liquidity.

The Orchard will be a De-Fi game on the Optimum Fund ecosystem. Who said we can't have fun while making, profits in the process? So as not to interfere with the flow of OMF token, The Orchard will have it's own native token, TOD.

You might be thinking how will this benefit the OMF token? The Orchard will have it's own small presale raise in-order to provide liquidity for the TOD token which will be used in the Defi game. For investors to be able to participate in this sale, investors will have to acquire OMF tokens, stake them in The Chest not less than one month before The Orchard IDO raise.

One will need to have staked quite a significant amount of OMF tokens in The Chest in-order to participate in The Orchard presale. This will be a way to reward holders, stakers and believers of Optimum Fund and will also serve as an incentive to increase floor price of OMF.

As mentioned earlier we will always be on top of our game by grasping and implementing all new concepts in the Optimum Fund ecosystem. The Orchard will be part of the utilities that the ecosystem offers having different taxes from the OMF token which will be provided in due time. Clear instructions will also be conveyed to our investors, who would love to be part of The Orchard.

The Orchard staking system will be quite different from The Chest staking system. The Orchard stakes cannot be unstaked, instead investors will be receiving 2% daily ROI and will be able to maximise on their daily returns by compounding the TOD token.

We highly encourage investors to compound so as to enjoy higher yield rewards. Taxes will also be injected back to the program to make it more sustainable feasible.

HOW THE ORCHARD WORKS:

After The Orchard presale raise investors will only receive TOD tokens which they can deposit on The Orchard. Old Man Charlie owns the The Orchard. On his land Old Man Charlie grows vines that are harvested, and later processed into wine.

Each vine grown and harvested yields wine which he later sells for profits in the market. The more vines he grows in his farm the more wine is processed and sold in the market for profits. In our case, once you deposit TOD your vines start growing.

The more TOD you deposit the more vines you grow in the farm. Once you grow vines, they will be harvested and processed to wine. The wine will be your reward which you can later sell for TOD. You can sell the TOD on any trusted exchange, but we recommend using Pancakeswap Finance.

We also advice investors to compound, their rewards by depositing more TOD in turn increasing their daily returns. You will earn 2% daily from your staked deposits. Keep in mind TOD token price will be ever fluctuating. The Orchard token contract will also be audited by a third party company.

To commence with the game:

- 1. Buy TOD on PCS. Hit the approve button then fill in how many TOD worth of vines you want to grow. then click "GROW VINES".
- 2. The game will start immediately and your vines will start to grow. Vines will be harvested later on and processed into wine which you can later sell for TOD.
- 3. Enjoy the process as your vines continue to grow and more wine is processed for you.
- 4. The wine (TOD) can be sold on PCS or compounded back to The Orchard.

The choice of blockchain is based on its low transaction fees, increased security and it's multi-chain abilities. Always purchase using contracts that are pinned on the main social media platforms and website. We'll be doing random airdrops to the community through various competitions that will also be announced.

OMF will be deflationary in that it pays stakers from taxes on transactions and not through inflation that leads to collapse of the whole system. Optimum Fund mechanism is laid out in a way that it decreases the total supply and circulating supply at the same time. With this approach Optimum Fund will be able to utilise further functionalities and use cases to OMF to create an ever increasing price floor and sustainable chart.

Taxes and tokenomics will later be updated in the whitepaper for public viewing. Private sale dates and presale dates will also be updated on the official whitepaper and website. Optimum Fund will be in different chains as indicated earlier. The first chain that Optimum Fund will be deployed to will be Avalanche C-Chain. We decided on this since Avax has low transaction fees, tight security and fast transactions too. Utilities and functionalities will be different on each chain.

Our vision is to be a decentralised trust infrastructure of the internet, starting with Web3 and DeFi. We also hope to bring mass adoptions of Web3 services.
